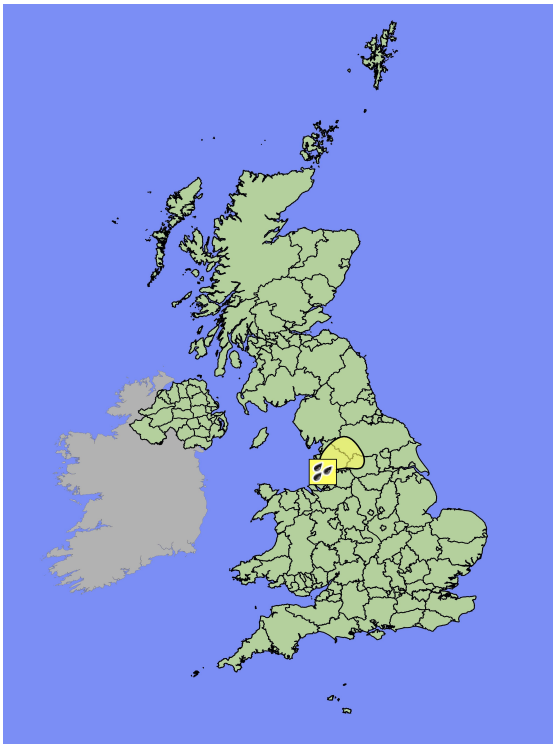
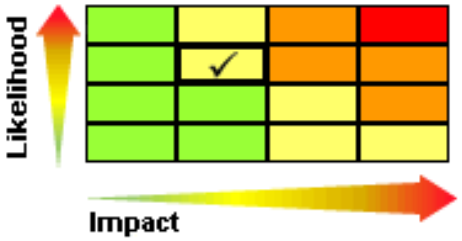
National Severe Weather Warning Service





Chief Forecasters Assessment
An unstable west to southwest airstream covers northwest England and will bring in further heavy showers through the afternoon and into this evening. A further 15-25 mm of rain could occur locally with perhaps as much as 40 mm possible in a few places. Following recent very wet weather the ground is saturated so there is the potential for localised flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **14:00 on Wed, 03rd Oct 2012** until **21:00 on Wed, 03rd Oct 2012**

Further heavy and perhaps thundery showers are likely to affect parts of northwest England this afternoon and last into this evening.

With the ground already saturated following heavy rain over the past few days, the public should be aware of the risk of some localised flooding.
